

1 Python Code Example

Here's an example of Python code included in a LaTeX document:

Listing 1: My Python code

```
1 def hello_world ():  
2     print ("Hello, world!")  
3  
4 hello_world ()
```

As you can see in Listing 1, the code defines a simple function `hello_world` () that prints " Hello, world!" when called.
